Program Specification

Swap Method

1   PROGRAM DESCRIPTION

Write a method that accepts an array as a parameter and swaps two of the elements, also specified by parameters

2   INPUT DESCRIPTION

The method should accept 3 parameters:

1. An array of double variables
2. An integer index of the first value to swap
3. An integer index of the second value to swap

3   OUTPUT DESCRIPTION

Create a driver class with a main method to exercise the swap method. Print the array before and after the swap method is called.

4   WHAT TO TURN IN

- Your code
- Multiple documented test cases
