Problem Specification

Print Receipt

1 PROBLEM DESCRIPTION

Fix the problems in the file *Receipt.java* file provided on the course website. Add to the file to print a receipt in the console using the format specified below

2 OUTPUT SPECIFICATION

```
------------------------------------------
| 3 x Banana                      $0.48 |
| 2 x Vanilla Ice Cream           $3.96 |
| 2 x Chocolate Ice Cream         $5.96 |
| 2 x Strawberry Ice Cream        $3.96 |
| 1 x Whipped Cream               $3.38 |
| 2 x Cherries                    $4.48 |
|                                       |
| Total                          $22.22 |
------------------------------------------
```

Each line shows the total price for the items. The file contains the unit price and quantity; you will have to combine these in your modified file. Include code to calculate the total before printing it on the receipt.

3 WHAT TO TURN IN

- Your modified *Receipt.java* file
- A screenshot of the output in the console
